New Pres-Pak[®] adhesive

SHIP—STORE—

COUNTLESS DIFFICULT-TO-PACKAGE

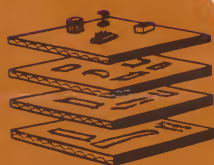

KEEP DIFFERENT SHAPED PARTS TOGETHER—regardless of size or shape, parts for a complete assembly can be placed together on one panel.

ACCOMMODATE ALL SHAPES—package electronic components, wireforms, springs, stampings, castings, glass, plastics, etc.—any odd or irregular shaped parts or products.

CAN BE STACKED—Pres-Pak Panels with parts can be stacked one upon the other without damage to parts. Holds parts for as long as needed in storage.

IDEAL FOR PRODUCTION LINE OPERATION—pre-arranged parts of Pres-Pak Panels to conform with assembly line timing at the supplying plant. Display production procedures on PRE-PRINTED Pres-Pak Panels. Directions and instructions can be quickly up-dated and revised.

PRES-PAK PANELS ARE EASY TO USE

With the release liner side facing down, slightly bend one corner of the panel downward. The "quick release liner" then can be peeled away exposing the adhesive. It's simple. Quick. No mess or fumbling.

MADE TO ORDER FOR YOU
— rounds, squares, flats, even die-cuts. Single or double faced corrugated, and chipboard, with your choice of bonding strength.

CUT SHIPPING COSTS—Use standard shipping containers with Pres-Pak Panels for safe, undamaged shipments.

NEW PRES-PAK "TAB" PANEL

For your added convenience, new Tab Panels are available. Just grasp the die-cut tab and peel away the protective liner. The adhesive is quickly exposed, the panels are ready to use.

 Single face corrugated board with adhesive coating on top or valley of flutes or over complete surface.

 Double face corrugated board with standard one side adhesive coverage. Adhesive on both sides also available, if desired.

 Chip board of heavy duty cardboard with standard one side adhesive coverage. Adhesive on both sides also available, if desired.

coated corrugated Panels —TRANSPORT GE PARTS AND PRODUCTS

Simply "stick 'em" on the Pres-Pak corrugated or chipboard Panels. The super-sensitive adhesive holds piece-parts firmly—in transit, or during storage until ready to use. Yet, parts are easily removed without the slightest trace of adhesive transfer.

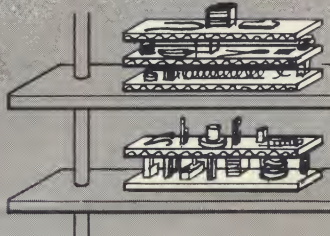

HERE'S WHAT PRES-PAK PANELS CAN DO FOR YOU!

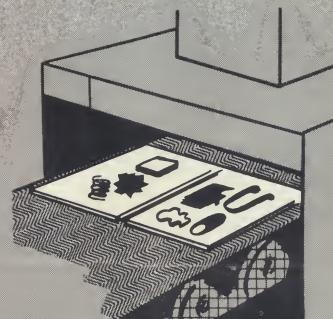

Simplify shipping

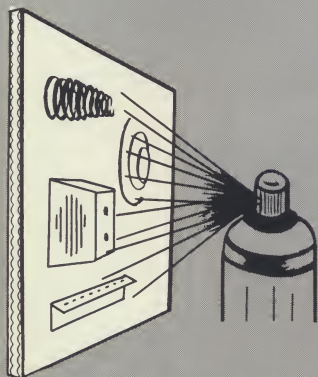

Hand-made, low cost
"skin packs"

Speed material
handling

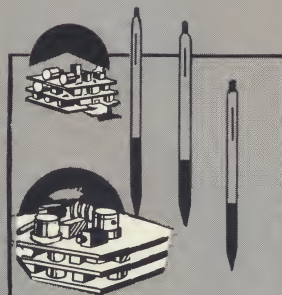

Facilitates industrial
X-Ray

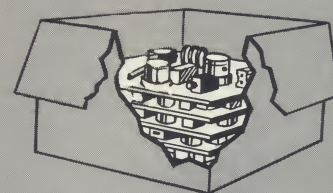

Speed paint spraying

Can be die-cut and
pre-printed

Controls inventory
Aid coding and sorting

Use Pres-Pak Panels any-
where small parts and prod-
ucts need to be stored,
shipped or handled.

New Pres-Pak® Pads

adhesive coated corrugated pads

CUSTOM PACKAGE PROTECTION FOR--

- irregular shaped items
- bulky parts, heavy castings
- precision components
- fragile valuables
- glass and ceramics

AVAILABLE IN MANY THICKNESSES

Pres-Pak Pads are available in 1 ply to desired thickness corrugated board with a protected pressure sensitive coating on one side. Each ply is $\frac{1}{8}$ " thick.

EASY TO USE

Simply remove the "quick release liner" and Pres-Pak Pads are ready to use. Super sensitive adhesive holds firm. You get a firm, tight package from shipping room to receiving room.

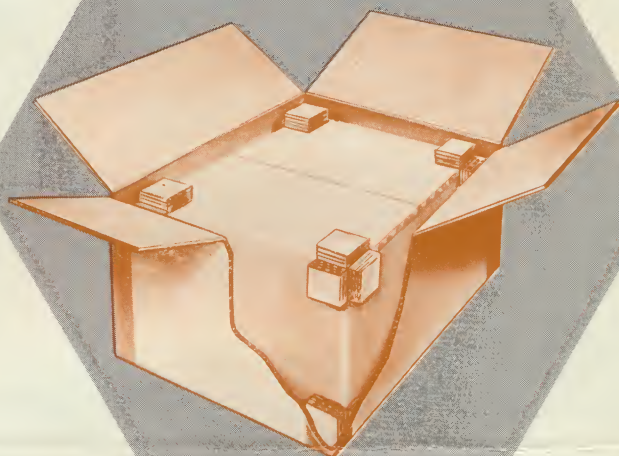

BUILT TO LAST

Pres-Pak Pads are unimpaired by prolonged vibration and repeated impact. Holds articles up to 150 lbs.

PRES-PAK SPECIAL DIE-CUT PADS

Pres-Pak Special Pads are die-cut to specific requirements. Your product fits snugly into position—will not shift or shake during shipment.

New Pres-Pak Pads for "build-up" shock-absorbing corrugated in the areas where protection is needed! Adhere Pres-Pak Pads directly to the item you're shipping or use them to customize standard shipping containers. Shipments arrive undamaged . . . protected by a cushion of corrugated. Yet, Pads are easily removed—even from a polished chrome finish — without the slightest trace of adhesive transfer. Strip coating is also available for economical and convenient shipping of bars and other "tack on" products.

Pres-Pak Corner Pads

GIVE YOUR PRODUCTS 8 CORNER PROTECTION

Pres-Pak Corner Pads provide 24 shock absorbing cushions. An inner package is held firmly in each corner by three shock and vibration absorbing pads. The super-stick adhesive binds the Pads to the inner package—suspending it within the walls of the outer carton.

Pres-Pak Pads can be used as corner pads to your desired thickness without taping.

HERE'S HOW PRES-PAK PADS ARE USED

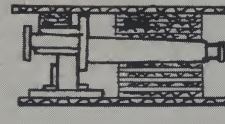

Suspending corrugated layers

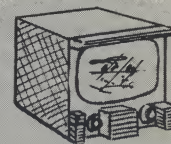

Pres-Pak Corner Pads

Built up top and bottom

Irregular shaped items support

Use directly on any item
